

## Self-Commitment by the E.ON Group

Good governance is an ongoing commitment shared by our Board of Management, our executives and all our people at E.ON. We believe that good corporate governance accompanies and substantially contributes to our long-term business success. These principles are reflected in our Code of Conduct, which demonstrates our commitment to good corporate behavior and defines our responsibilities and how we expect our people to behave to ensure a constructive and productive working environment that supports our core values and beliefs. Every Group company and all of our people are expected to live up to these principles.

Exceeding the focus on good corporate behavior we clearly commit ourselves to act sustainably in all respect. Our business is driven by sustainability. Acting sustainably means when making daily business decisions, we specifically consider the short- and long-term impacts on tangible and intangible resources and stakeholders. We consider the needs of the present generation and also anticipate the needs of future generations.

It is for this reason, we explicitly support the Sustainable Development Goals (SDGs) of the United Nations (UN) which have been approved by the UN in September 2015. With these goals, the United Nations created the most ambitious approach in history to addressing the major social and environmental problems facing humanity.

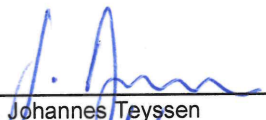

In line with our business activity, the E.ON Group is focusing its efforts on providing affordable and clean energy (goal 7), fighting against climate change (goal 13) and supplying sustainable cities and communities (goal 11).

We also make indirect contribution to most other Sustainable Development Goals due to fact that our vision – Improving people's life – and our business strategy – Partner for the New Energy World – is based on an unambiguous commitment to sustainability.

We report our achievements openly, reliably and self-critically. This includes making an appropriate and balanced presentation of our economic, environmental and social activities and achievements in line with the Global Reporting Initiative's current recommendations for sustainability reporting.
